DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 3-6, and 8-9 are allowed.
2. The following is an examiner's statement of reasons for allowance: The claims recite an apparatus for forming a laminating object. The apparatus includes a conveying means for conveying the laminating object, a drying means for drying the laminating object after an image was formed by ink discharged from a recording head, a laminate means for effecting laminate processing on the object, a control means for controlling the temperature of the drying means at a predetermined temperature T1 when the laminating object is being conveyed by the conveying means before the laminating object arrives at the drying means and adjusting the temperature to T2, which is greater than T1, when the laminating object is being dried by the drying means. The admitted prior art discloses a laminating apparatus for ink jet recording medium. The apparatus includes a conveying means for conveying the medium, drying means for drying the ink on the medium, and laminating means for laminating a film onto the imaged surface. (Specification, Page 3, line 1 to Page 4, line 22) The admitted prior art does not disclose a control means to control the temperature of the drying means at a predetermined temperature of T1 when the medium is being conveyed by the conveying means before the medium arrives at the drying means and adjusting the temperature of drying means to T2, which is greater than T1, when the medium is being dry. Masuda et al discloses an apparatus for drying photosensitive material with means for controlling the temperature of drying means. The apparatus includes a temperature sensor, which

maintains the heating section at a standby temperature, a film sensor detects the film or sheet material as the film or sheet is fed to the apparatus and switch the drying heater on to increase the temperature of the drying means to the operation temperature, which is greater than the standby temperature. (Col 6, lines 38-68) Masuda et al is silent as to the apparatus includes a controller to control the temperature set at the standby temperature as the film is conveyed to the drying section and switch to a higher operating temperature when the film is being dried by the drying means. A search of the prior art of record did not disclose reference or references in combination with the recited feature.

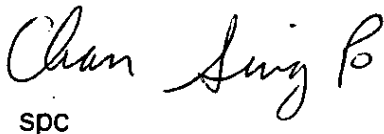

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
